Impact on Communities

As a member of a community that is struggling to recover from the past few years, I see that the future of Electric Vehicles and their positive impact on the environment. Careful placements of EV chargers can provide economic advantages and revitalize communities. I would like to see their placement is not just based upon need of long distance drivers but communities that cannot afford or locations where availability of chargers have not been practical such as multi-dwelling or rental properties.

Small towns, cities and communities by-passed by major highways are sometimes just a short drive from an exit but are only visited by the local residents. Long distances drivers, would be brought back to communities and rejuvenate them and provide them with a service that may will encourage EV adoption.
