Jane Berner and team,

(In reference to technology preference for electrolysis)

Great work, the direction CEC is heading, and current accomplishments is truly remarkable. I feel electrolysis is going to carry by itself and requires less assistance. Companies like Plug Power are planning commercial scale production already, (30 ton per day).

California has excess wastes that produces large methane emissions. I would suggest focusing on landfills, woody waste, and wastewater hydrogen production, like the Raven SR project in Contra Costa County, along with renewable natural gas and all technically feasible options.

Respectfully,

Dominic Lucero
