Keep Diablo Operating

We need to keep the Diablo Canyon Power Plant operating to ensure electrical system reliability in California. Diablo helps accomplish that in an environmentally friendly way -- no greenhouse gases. There are days the sun doesn't shine. There are days the wind doesn't blow. There are more and more years with inadequate rain/snow to maximize our hydro power sources. Nuclear doesn't require battery storage. It's absurd to waste the existing investment in an established power facility. While you're at it relax the environmental regulations for the once-through cooling system.
