## **Retire Diablo Canyon Nuclear Power Plant**

Diablo Canyon nuclear power plant reached its expiration date years ago, and has already been operating well beyond the known lifespan for rationally generating electricity. This fission technology is ancient in tech years, and was severely flawed & unsafe at its inception. It has already cost rate payers thousands more than promised over its unsafely extended lifespan, and now will cost 3 times that to decommission. Do not waste any more rate payers money trying to resuscitate a dangerously old power plant. PG&E is already allowed to turn off electrical service to us consumers any time it decides to, creating unnecessary blackouts on a whim....DO NOT use the threat of blackouts as an excuse to revive such a dangerous, radioactive-saturated & expensive power plant. If you continue the operation of Diablo Canyon beyond PG&E's, you risk the nuclear "accident" we've been dreading for over 40 years, and will be responsible for the resulting horrors unleashed by such an irresponsible decision.
