Keep Diablo Canyon Nuclear Facility Closed

The revival of the Diablo Nuclear Power Plant is a dangerous prospect . The plant sits on 4 active earthquake faults . It is classified as the most vulnerable of all nuclear power plants to sustain an earthquake . Spent fuel containing highly toxic plutonium is already in storage there and adding more heightens the danger to the local community and beyond . Diablo Nuclear Power Plant has also been designated as unstable due to embrittlement . The advancing of the possibility of reopening this plant is not worth the risk it imposes . Keep the California Central Coast safe .
