Save Diablo! For the sake of the environment and the grid, keep Diablo running

Diablo Canyon is an irreplaceable component of California's push to decarbonize its grid. 9% of California's energy comes from Diablo completely carbon-free. Nuclear power is safe and requires less land than any other energy source.

If Diablo were to be closed, the lost baseload capacity would be replaced by natural gas. Why retire such an incredible asset just to replace it with fossil fuels? To listen to the baseless fearmongering of the anti-nuclear lobby would be to grant yet another win to the hydrocarbon industry. Take the side of the environment and Save Diablo!
