energy abundance

When I was a child in the early 50's and nuclear energy was being promoted prior to implementation.....it was promised to be "so cheap.....that it wouldn't even be worth metering" basically FREE FOR ALL! Of course they for got to factor in the dangerous nuclear waste! Now there is proven and working LENR, for example.....along with over 6,000 other "Free Energy" patents already filed and approved by our own USPTO.....but "they" (big oil) have squashed all of them! Wake up....the universe is full of energy far beyond Oil and Natural Gas!!!! Widen your scope! Nuclear energy is far too dangerous....and there are lots and lots of other free energy sources available....if you only dig into the USPTO files to see for yourselves!!! Darrell

Rolstone, (retired) CCO of Energy-Synergy Intra-Global, and "synergy design consultant" of some repute!
