Diablo Nuclear Plant License

The proposal to extend the plant operation would violate the closure agreement established in 2016 and codified by the California legislature and the CPUC in 2018. Moreover, Diablo sits near multiple active earthquake faults and is seismically vulnerable. Continued operation of the old and unreliable Diablo Nuclear Plant discourages the use of renewables. Ratepayers and taxpayers have already paid out \$85 million in mitigating costs to the impacted communities and millions more toward decommissioning costs. So, it makes little economic sense to continue funding this fruitless endeavor rather than fund more renewable energy projects.
