Docket Number: 21-ESR-01

Against continued operation of Diablo Canyon

- The operation of Diablo discourages the use of renewables.
- Diablo is old and unreliable. Maintenance has been deferred. The last replacement for aging parts resulted in a seven-month periodic shutdown of Unit 2 during 2020-21.
- Diablo is seismically vulnerable. It sits near multiple active earthquake faults.
- The proposal to extend the operation would violate the closure agreement established in 2016 and codified by the California legislature and the CPUC in 2018.
- Ratepayers and taxpayers have already paid out \$85 million in mitigating costs to the impacted communities and millions more toward decommissioning costs.
- Where/how will this extra high-level radioactive waste be stored? Currently, there are only plans for the storage of waste generated through 2025.
- Diablo's once-through cooling system is now unlawful. How will that be rectified? Has the cost to construct a compliant cooling system been calculated?
