Docket #21-ESR-01

Docket #21-ESR-01
California Energy Commission, Governor Gavin Newsom, California Independent System Operator (CAISO)

STOP with the falsehoods regarding the request for change and continuation of the limited term operating license of the Diablo Nuclear Power Plant already scheduled for retirement in 2025. We know what PG&E is up to here—more money and subsidies for their greedy pockets at the expense of Californians. We know it is PG&E who creates power outages with random shutoffs of power to limit their liability when their old, unsafe lines start wildfires that ravage our state. They have for too long lined the pockets of investors and not done the work to put the lines safely underground where the fire risk is lessened. Extending Diablo Canyon's term isn't going to fix the PG&E caused power shortage, safe and renewable energy will. How much is this going to cost California taxpayers? PG&E is notorious for passing along costs to users and profits to shareholders. We will be left once again to pay, pay, pay and oh by the way, those of us who live in the shadow of the Diablo Canyon Emergency zones get ready to die, die, die. STOP this useless extension; move forward to a nuclear-free future of renewable energy. STOP going backward to the old, easy, slippery slope of lies and corruption. To better solve this issue, make PG&E pay for the clean up and shut down, instead of California State Taxpayers and instead of the monies earmarked for the above clean up spend that money by giving away (yes free) solar panels to all California homeowners and businesses. Finally, when will the Morro Bay Wind farm project start? Better use of our revenue than once again funding an organization with its own agenda in mind instead our states agenda.
