Too Dangerous, Costly and too expensive

Close all aging Nuclear Generating Stations as keeping them open will be very hard legally, too costly, and very dangerous.

Diablo Canyon is built on Seismic faults, and subject to sea level rise. The actual production of electricity is carbon free, but not emissions free. Nuclear is not green as creates huge amount of Carbon during the mining, milling, transportation, running the plant the during decommission. Both Small and large Nuclear power plants create Thousands of tons of radioactive waste and there is no safe place to put it. It may be stranded here forever.

Sustainable energy is the future. They are safe and inexpensive, will create jobs and ready to go now!
