Joint-agency workshop on Diablo Canyon Aug 12, 2022

Each day the doomsday clock gets closer to midnight--it's now 100 seconds to midnight. We can no longer make wrong, Earth-destroying decisions. Overturning the already-legislated decision to shut down Diablo Canyon in 2025 is A HUGE MISTAKE. Staying with the plans to close Diablo is the only sane and safe decision to make, to avert an escalating pace to doom.

Diablo is an old and ailing nuke, plagued by lengthy and expensive repairs, costing taxpayers billions of dollars in subsidies to keep the plant operating, generating evermore radioactive waste stored indefinitely in vulnerable casks onsite, with ever-present threats of meltdown from earthquakes (under and around Diablo), operational failures and errors, tsunamis, and terrorism (bad actors/rogue leaders globally and domestically)--all possible scenarios with devastating consequences on a mammoth scale. Nukes are themselves weapons of mass destruction--why keep operating a radioactive entity vulnerable to attack? IT'S A FACT: DIABLO IS NOT SAFE, NOT CHEAP, AND NOT CLEAN.

There is no more time to waste, no more money to waste, on foolhardy, ignorant, planet-killing, politically-motivated, illegal and improper, decision-making. Now is the time to put public money into safe planet-saving technology. SOLAR AND WIND ARE CLEAN ENERGY and ready to be ramped-up immediately. Nukes and fossil fuels are not clean energy!

Support keeping the timetable of Diablo's closure and support solar and wind. Time's a-wastin'.
