We MUST extend Diablo Canyon operations to save lives, it is the ONLY ethical thing to do

To close Diablo Canyon power plant will cause many thousands of deaths from resultant air pollution, and untold numbers of lives from exacerbated climate change. There is no pollution-free alternative energy source comparable to Diablo Canyon. California still generates about half of it's electricity from fossil fuels. As closures in other states have demonstrated, lost nuclear power capacity is filled in by additional fossil fuel burning. Statistically, nuclear power is the safest source of electricity, even when considering all historical disasters.

We must follow the science, and not the lies and misinformation promulgated by fossil fuel and other interests.

It is unethical and evil to shutdown any operational source of carbon free energy in a time of crises.
