Diablo Canyon needs to be kept operating

It's just a scientific fact attested to in every verifiable expert data that nuclear power is simultaneously the most reliable, safest, and lowest carbon energy source. All of which are things the State of California is currently lacking. Particularly the reliable power. Diablo Canyon alone represents a tenths of the State's electricity. And this is at a time when we're already struggling to have sufficient generation capacity.

So any plan to shut it down is self inflicted terrorism. Doubly so when the motivation is derived from anti-nuclear alarmists who've never said anything of consequence in 60 years and have only managed to prove that being loud is the only requirement in this democracy easily eclipsing rationalism.

So I'd like it if we took a break from the last 30+ years of incompetent energy policy and gave science a try. Lets keep Diablo Canyon open and ideally build more nuclear power plants.
