Replace Fossil, NOT NUCLEAR

Nuclear energy protects air quality by producing massive amounts of carbon-free electricity. It powers communities in 28 U.S. states and contributes to many non-electric applications, ranging from the medical field to space exploration. Diablo Canyon is a critical part of California's, and for that matter America's energy future. As we see increasing demand on both resources and generation capacity from the electrification of America's roads, generating the power in a carbon-free manner is more important than ever. Diablo Canyon must stay online as long as it is safe and capable of meeting its license criteria.
