Time to shut Diablo Canyon NP down

Nuclear energy has had its day and should have been retired long ago. The companies that built and profited from this technology should be held to account for every penny it will take to decommission these plants (Diablo) and properly dispose of the waste. (Good Luck keeping that safe for 50,000 years). It is not our responsibility to pay for this misguided and forever damaging technology. The cronyism and ridiculous impunity that this industry has been granted by the Gov is criminal. Mafia comes to mind.

Shut it down. Take back all the profits, clean it up as best you can, and pray there is no HELL, because that is where every person that perpetrated this crime against our planet and this living community deserves to land.
