## **Keep Diablo Canyon OPEN- Clean, Carbon Free Energy!**

Diablo Canyon is a powerhouse that supplies 10% of California's electricity. Keeping it running keeps us from burning and fracking for more natural gas to burn in it's place. California also imports 'dirty' electricity from our neighboring states, who are burning coal and methane, to make up for our demand.

We need to support our local industries, hospitals, schools with consistent and reasonably priced electricity. Relying on other states to send us electricity at their terms is not a wise path. We were at the mercy of Enron from Texas not that long ago. Now we rely on Utah, Arizona, and Idaho for our imported power.

We cannot sway with political leanings and build a grid on inconsistent and unreliable renewables.

Save Diablo Canyon, and expand nuclear energy in California.

We're going to need it as this decade keeps rolling- abundant electricity, process heat for manufacturing (even solar panels!), desalination on large scales.
