We need Diablo Canyon to stay open

Thank you for reading my comment.

I'm sure you're aware California already has power issues which cause black & brownouts. Diablo Canyon provides approximately 10% of the state's power and is the single largest source of clean energy in the state. If we are serious about achieving clean energy goals while having a reliable grid then we simply cannot afford to lose Diablo Canyon. Losing Diablo will result in more Gas or Coal power as has been seen in New York & Germany with increasing costs.

I'd also like to add that Diablo Canyon is indeed very safe and as reports show, does not have a seismic vulnerability issue.
