## **don't let perfect be the enemy of good**

there is more than enough documentation available to anyone reading this to make it clear that the obstacles to a functioning Diablo Canyon are non-technical. From that position what remains is to analyze the cost. What is it worth to have decades or low or zero carbon energy from an in-state facility? it's not a number calculated in today's dollars alone. How much money would people pay for a dodo bird? How much money will future generations wish they had paid to keep the excess carbon out of the atmosphere?
