Extract Full Value FROM Diablo Canyon NPP

Grid stability. Reliability. Reasonable cost. A stellar history. Low carbon grid energy. All these advantages should be sufficient to allow Diablo Canyon NPP to continue its service.. but there's one more reason, and that is that it is after all these years of operation and amortized asset. It is a nuclear power plant operating at its peak economic lifecycle. It employs high quality talent who are themselves contributors to the local community and economy.

Early closure is irrational in today's energy and climate environment.

Do not allow Diablo Canyon NPP to be replaced by gas fired plants.
