Diablo Canyon Nuclear Plant must be kept open

Keeping Diablo Canyon Nuclear Plant open after its currently-planned closure date of 2025 is one of the most important things California can do to protect the environment, stabilize energy prices and protect CA grid reliability. This plant has been extensively studied and deemed safe, and with routine maintenance and refurbishment, can run for another 40 or more years. It could also be dual-purposed to desalinate much-needed water for the state, while continuing to provide reliable, safe power.

The sunk costs of this plant, both in terms of dollars and CO2 emissions (most of which happen during construction of a nuclear plant) cannot be recovered by any other method of providing clean, reliable energy. This plant is an investment that is still operating in its prime, and should be allowed to continue to contribute to CA's energy mix.

Shutdown of DCPP will hurt virtually everyone in some way or another, including those of us from out of state.

This premature shutdown must be avoided. Please do what's necessary to rescind the bad decision to close this amazing source of clean reliable energy (and jobs!), before it's too late.
