Keep Diablo Canyon Open!

It's important California maintains energy independence, especially from fossil fuels and in order to do that The clean energy from Diablo Canyon must continue to be produced. We are also developing drought in a large portion of our state (Washington) so our cherished hydro power will be diminished and diverted for agricultural use. Since California is a bell weather state, a common sense decision to keep Diablo Canyon Nuclear plant open also affects the rest of the country's attitude towards keeping green nuclear power. Do not follow in Germany's footsteps, of science denialism. Even they are rethinking their decision to close nuclear lands. Firm energy from nuclear is needed to operate with renewables. Please keep Diablo Canyon open!
