We Need Diablo and even more nuclear power generation

Nuclear is our best and only reliable source of carbon-free electricity. Closing Diablo would be bad for the reliability of our electricity. Such a decision would be purely ideological and not based on reality. Other sources such as wind and solar requires as yet to be developed reliable grid scale storage, which is not feasible now and may never be.

When you compare fairly the pros and cons of solar, wind, and batteries for base load versus nuclear, nuclear wins hands down.
