Save Clean Energy Progress, Save Diablo Canyon!

Bold and decisive leadership is necessary to protect California's clean energy progress and its ambitions of becoming a leader in decarbonization. As other states begin acting to save their own nuclear plants and altering their energy plans to value carbon-free nuclear, it would be a devastating setback to lose cheap, reliable, clean Diablo Canyon.

Your action on this issue today could reverberate for generations to come, maintaining cheap in-state generation rather than giving up a key competitive advantage in a carbon-constrained future. We urge you to do everything in your power to keep this plant running for our grandkids.
