Nuclear power is the most reliable producer of electricity

The risks of operating nuclear power plants can never be reduced to 0, but the risks associated with failing to address the climate crisis are undeniable. To address the climate crisis, the expansion of wind and solar energy sources is important, however continued support for the world's most reliable form of energy, nuclear power, is essential. It is clear that the demand for electricity in California will only grow, as people purchase more electric cars, operate air conditioners as temperatures rise, and look to increase industrial demands in the state. Shutting down Diablo Canyon would be akin to shutting down all the wind turbines in the state (<https://thebreakthrough.org/issues/energy/shutting-down-diablo-canyon-needs-to-be-reconsidered>) and brings CA further from its carbon emission reduction goals. As a CA resident, I think it is realistic to accept that the future must leverage all types of carbon-free electricity sources to meet California's needs. So, keep Diablo Canyon open!
