## **Save Nuclear Energy in California**

In a recent study from Stanford and MIT, it found that even delaying the retirement of Diablo Canyon to 2035 would reduce California power sector carbon emissions by more than 10% from 2017 levels and reduce reliance on gas, saving \$2.6 Billion in power system costs, and bolster system reliability to mitigate brownouts. If operated to 2045 and beyond, Diablo Canyon could save up to \$21 Billion in power system costs and spare 90,000 acres of land from use for energy production.

Please support the proposed legislation that would ensure the continued operation of Diablo Canyon past 2025. To ensure California's clean energy future for both humanity and our planet, we need Diablo Canyon.

Will you support the continued operation of California's single greatest source of clean energy, Diablo Canyon?

Thank you for your time.
