Save DCP

Hello, I am a nuclear engineer in Los Angeles California and am urging you to keep Diablo Canyon Nuclear Power plant open! It has operated safely for several years and will continue to do so providing Californians with clean electricity. With the growing demand for electric cars, it is essential that we keep ALL clean sources of energy online in California. Unfortunately, whenever nuclear plants close, they are always replaced by coal or natural gas which contribute more CO2 to the atmosphere and worsen climate change. I have lived in California my entire life and have seen the effects of climate change as the wildfires and droughts have gotten worse every year. The worst thing we could do right now is shut down our only reliable source of 24 hour clean energy. I urge you to keep DCP OPEN and invest in more clean nuclear energy for the state. I am old enough to remember when San Onofre Nuclear Generating Station shut down and led to frequent blackouts and an increased reliance on natural gas from other states. Please do not make that same mistake again!

Check out this energy impact calculator to see the positive impact nuclear energy has on our environment: <https://energy.glex.no/calculator>

Thank you,
Jessica
