Support for Diablo Canyon Power Plant; docket #21-ESR-01

The Diablo Canyon nuclear plant contributes to roughly 15% of California's carbon-free electricity. California could reduce power sector emissions by more than 10% from 2017 levels and save some \$2.6 billion by operating the Diablo Canyon plant through 2035, according to a report released last November from Stanford University and the Massachusetts Institute of Technology. (<https://www.utilitydive.com/news/pge-exploring-possibility-of-keeping-diablo-canyon-nuclear-open-poppe-ceo/628414/>).

Dear Sirs/Madams: I urge you to keep the grid between California, Oregon and Washington State stable during these uncertain times of power disruptions man-made through transition to clean air resources. Diablo Canyon power plant helps keep the grid functioning 23/7/365 and the power on without contributing to greenhouse gas emissions, particulate matter, NOx or SOx. Please encourage PGE to extend the life of this vital electricity generator.
