Keep Diablo Canyon Open

I write as a private citizen in support of the continued operation of California's largest single source of clean, CO₂-free energy, the Diablo Canyon nuclear power plant. Nuclear power remains essential if we are to have a prosperous future without the environmental degradation that would result from increasing our reliance on fossil-fuel energy. We should keep Diablo Canyon open, while we also continue to encourage the development and deployment of advanced nuclear power technologies to produce abundant, clean energy. Nuclear power is essential to climate action that also moves California forward.
