Shutting down Diablo Canyon would not be productive

Diablo Canyon has been a staple in the Central Coast supplying power, not to mention all the jobs that support the livelihoods of so many people in this area for decades. If we were to shut down the canyon it's not like it would just disappear because you can't just get rid of something like that, it would still be around forever, just not in use. So we would have something that is capable of creating and supplying power but render it inactive and non-usable. That would be the opposite of progress and really just doesn't make any sense. It's easy to complain about the canyon when it's supplying the power you need to make all the things in your everyday life easier, but if it was to shut down and things started to get harder and more difficult in life people would feel completely different about the situation. Diablo Canyon needs to stay open and keep supplying power as well as being able to use the facility to train the next Generations of workers that will learn the things necessary to keep the progression as a society moving forward. KEEP DIABLO CANYON OPEN!!!
