Save Diablo Canyon Nuclear Power Plant

Diablo Canyon Nuclear Power Plant has been proven to be a safe and reliable source for the last 38 years. It has been a clean source of energy and it is good for the reduction of greenhouse gases. Though the current licenses are due to expire in 2025 and 2026, the plant has decades of life left. California needs this power plant for its future electric needs. Interveners' arguments promoting apocalyptic issues border on the the absurd, nuclear power plants are not nuclear bombs that can explode into a mushroom cloud. Valid arguments have been addressed over and over again (and will continue to be addressed with the latest science). My family and I support the continued operation of Diablo Canyon Nuclear Power Plant. We live in San Luis Obispo County.
