## **Save Diablo!**

Californians deserve clean, reliable energy.

Diablo Canyon provides that.

As the energy crisis deepens and the American grid groans under the pressure, shutting off Diablo turns the Golden State in the direction of Germany. By next spring, its economy will be in shambles and its emissions through the roof--all because it shutdown nuclear while overbuilding renewables, which left it vulnerable.

How many Californians will breathe fouler air or suffer in the scorching heat if Diablo closes or lose the food in their fridge during a blackout when they're already living paycheck to paycheck?

I've lived in California, my wife is from Los Angeles, and I love the state. It need not suffer a forced error like this.

Save Diablo!
