California Nuclear Power Plants Must Stay or Be Closed

How lucky we all were when the various agencies and commission decided to close the nuclear power plants at San Onofre first, then still in the planning, Diablo Canyon. In their respective paradise-like locations, they threaten our delicate ecosystems, even as most of the population is unaware. We know about Fukushima, we know about Chernobyl, we know what currently threatens the areas around nuclear power plants in Ukraine.

We have air power, sun power, even hydrogen, all of which are so much safer! Let's stay with the program and keep the closures of nuclear plants and the safe conveyance of their waste materials, on schedule. Let's recognize when we have done something CORRECTLY. Thank you, Marilyn Fuss
