Strongly oppose extending operating license for Diablo Nuclear Plant past 2025

I strongly oppose extending the operating license for Diablo Nuclear Plant past 2025. Diablo is old and unreliable and maintenance has been deferred. It faces numerous threats due to the fact it sits near multiple active earthquake faults. That is why the CPUC issued an order in 2016 calling for its closure.

Currently Diablo's once-through cooling system is now unlawful. How will this be corrected? What is the cost to build a new compliant cooling system? Where and how will the extra high-level radioactive waste be stored? The only plans we have for new waste storage generated through 2025.

Finally PG&E is a corporate felon responsible for nearly 100 deaths. Therefore we cannot trust them with the running oversight of Diablo.
