Please extend Diablo Canyon's operating period

Diablo Canyon Power Plant is the only source of clean energy in California whose output does not depend on weather, climate, or time of day. With the effects of global warming continuing to intensify, the worst thing California could do is shut it down and burn more methane to compensate.

I am for clean energy. Land is a limited resource, and nuclear can produce hundreds of times more power per acre than wind or solar. Therefore retaining the nuclear plants we have and building more of them would be the fastest most efficient way to add more clean energy. I want Diablo Canyon Power Plant to remain operational long past 2025, so I favor the passage of the Environmental Trailer Bill to make that happen.
