Wildfires caused by climate change grow increasingly more destructive to California. Closure of Diablo Canyon will increase California's reliance on carbon emitting energy sources in the near term, contributing to climate change. Please explain your plans to mitigate this impact and compensate those victims of wildfires.

Additionally, the California forests being decimated by wildfires are home to many endangered species. Please explain your plans to address the impact on endangered species should California decide to close Diablo Canyon and continue reliance on carbon-emitting energy generation
