Keep Diablo Canyon Open - the Environmental Case is Strong!

I'm a strong environmentalist. I have solar panels on my roof and am shopping for my first EV. Because of my commitment to solutions to climate change, I strongly support keeping Diablo Canyon up and running and generating zero-carbon electricity! Diablo Canyon generates enough electricity for 3 _million_ Californiansâ€”day and night, wind or no wind. I fear that if we shutter Diablo Canyon, we'll run short of electricity, suffer demand constraintsâ€”or worst of all replace the zero-carbon electricity with millions of metric tons of fossil-fuel emission. Diablo Canyon has been running safely for decades. I believe we can resolve concerns around plant life extension if we put our minds to it. Let's keep this plant operational.
