Save Diablo Canyon

There is no large scale energy storage. California has by far the largest amount of battery storage installed in the country at about 2000MWh. This is not enough to replace Diablo Canyon for a single hour. Because of this, it is essential that we have a diverse carbon-free portfolio that includes nuclear in order to maintain a reliable supply of clean power. Diablo Canyon must stay online as long as it can be maintained in order to support our clean power goals.

I have worked in the energy industry for decades, I currently work at a gas power plant. I know how important nuclear is to support our goals.
