Mr David hartsough

PG and E should honor the decision to close Diablo Canyon in 2025. There is NO safe way to dispose of the radioactive waste. Renewable sources of energy and less expensive and no dangerous to the people of San Luis Obispo and California than continuing Diablo in operation. Diablo was not built to be safe even this long. As PGE knows, the Hosgri fault could cause an earthquake at any time. As we see in Ukraine, a nuclear power plant can be extremely dangerous if there is war or armed conflict in the area and/or if the plant is targeted by terrorists. There are viable alternatives. Why keep this old nuclear plant which all its dangers?
