Diablo Canyon Power Plant

The Diablo Canyon Power Plant is one of the safest, most reliable sources of clean energy in California. Letting it close would run contrary towards the State's goals of powering the state without contributing to climate change. Please find ways to keep the plant operational. If it won't, it would be the equivalent of taking California's entire wind generation offline. Central Coast communities will likely have to replace it with fossil fuels. Instead, we should continue Diablo Canyon's ability to avoid emitting 7 million tons of CO₂ while keeping the lights on. Furthermore, SB100 identifies the plant as a clean energy facility in its requirement for the state to be 100% clean energy by 2045. Let's keep Diablo Canyon open past 2025.
