21-ESR-01 Diablo Canyon Power Plant

Nuclear power is one of the few currently deployed energy resources that is ready right now to help us move towards a realistic carbon neutral clean energy goal. Existing plants should be maintained online producing 24/7 clean energy until such time that the deployment of alternative of the clean energy resources are capable of filling the large baseload capacity currently generated by a nuclear power plant. Prematurely shutting down safe and good performing nuclear power plants and replacing the lost baseload production with natural gas or coal generated power makes no sense. Please take steps to ensure Diablo Canyon stay open and online, the future of California's energy portfolio depends on it.
