I believe that with energy costs rising, and the ability to have cheap nuclear energy in our backyard (I live and work in Central Coastal California), decommissioning this power plant does not make any sense. It would be wiser to spend what is necessary on this plant to make it compatible with whatever the current regulations state than to try to find other sources of energy at this time.

Solar power is very expensive to install, maintain and store, and the wind program out in the Pacific is many years away.

Please KEEP DIABLO running!

Thank you!!

Very sincerely, Joanie Williams
