## **Keep Diablo power plant closed**

As someone who lives downwind of the Diablo nuclear power plant I am opposed to the power plant operating or being reopened. The risks to myself and my family and my community even as far away as Chicago Illinois in the case of a catastrophic failure and run away radiation spreading event at the power plant are such that this plant should be shut down and never reopened. we have the resources and means to replace the energy provided by this source with reliable wind and solar energy and the continued deployment and development of energy storage solutions for the utility scale such as batteries in other options. All the expenses that would otherwise go into running this failed older and dangerous technology should be put instead to promoting an incentivizing solar wind and grid scale energy storage solutions which pose a microscopic level of risk compared to the potential risks inherent in this nuclear power plant.
