## **RETIRE Diablo Canyon**

To those who believe that faith and legislative determination trumps physics and metallurgy:

Do not put at risk (however statistically small the risk of a catastrophe you have taken on faith and via bribery) the ecosystem downwind of Diablo Canyon (and the entire nation is "downwind" of Diablo Canyon).

Diablo Canyon has run its course. Old "experts" agreed that it had reached end of life. However, new "experts" (paid handsomely to arrive at the conclusion, "no problemo!!!!") have concluded that, "those old "experts" were wrong. Diablo Canyon reactors can run another 20 years at no added risk. Anyway, the risk is so small that you don't have to worry about it. Those old "experts" didn't know what they were talking about when they thought embrittlement would make operating the reactor more risky as time went on. Pshaw . . . Earthquake fault mirthquake shmalt! Not to worry!!!!
