

DOCKETED	
Docket Number:	21-ESR-01
Project Title:	Energy System Reliability
TN #:	245235
Document Title:	Julie Webb Comments - No more nuclear power
Description:	N/A
Filer:	System
Organization:	Julie Webb
Submitter Role:	Public
Submission Date:	8/18/2022 11:15:15 AM
Docketed Date:	8/18/2022

Comment Received From: Julie Webb
Submitted On: 8/18/2022
Docket Number: 21-ESR-01

No more nuclear power

No. Just, no. A whole lot of work went into the decision to shut down Diablo Canyon: deep cost-benefit analysis and detailed planning. Let's stick with that, and with a fast path to clean, reliable energy.

The waste generated by these systems doesn't just "go away"; it gets added to the burden borne by disadvantaged communities and the earth itself.

Baseload power creates a mismatch for cheaper, cleaner wind and solar energy, and a more difficult-to-manage system. Big chunks of inflexible power do not address peak usage problems, which are better addressed by responsive storage and shifting demand.

Nuclear is a brittle source of power, especially in hot weather, and losing big chunks of inflexible power is a disaster. Far from stabilizing the grid, Diablo Canyon reduces the power available during peak times because system operators need to reserve power sources in case the facility has to shut down. It will cost taxpayers and ratepayers BILLIONS to keep Diablo Canyon online. This money is far better spent on 21st century technologies.
