Support Clean Energy - Shut Down Diablo Canyon

A great deal of public funds have gone into shutting down Diablo Canyon, a sound decision that should not be reversed. Funds expended on keeping the plant operating and the additional, enormous cost of retrofitting an antiquated and dangerous facility for earthquake protection are better spent on supporting roof top and commercial solar and wind power generation. Combined with aggressive support for public reductions in energy usage, measures to support clean energy can both support our energy needs and reduce the increasing impact of global warming.

As the representative of all Californians on the critical issue of public utilities, please refrain from reflexive support for the industrial interests that put their profit ahead of what's most sustainable, most equitable, for our energy needs into the future.

Thank you.
