We need flexible demand response, distributed renewables & storage, not expensive Diablo Canyon

Dear friends,

The decision to shut down Diablo Canyon was years in the making engaging representatives from a wide range of sectors. Let's not invest in Diablo-- instead we should invest in an accelerated path to renewable, distributed, reliable energy and storage which will be better for our communities, environment and climate.

Far from stabilizing the grid, Diablo Canyon reduces the power available during peak times because system operators need to reserve power sources in case the facility has to shut down. It will cost taxpayers and ratepayers BILLIONS to keep Diablo Canyon online. This money is far better spent on 21st century distributed, renewable energy and storage.

Thank you!
