## **Ms**

I am outraged that 1.4 billion dollars of our money will be handed to (forgiveable "loan" with built-in subsidies) to PG&E to keep a dangerous, aging reactor operating. As I understand it, the findings used to justify these extraordinary provisions include no citations to published studies by any California regulator or agency recommending a further life extension for Diablo Canyon, because there are none.

PG&E can't even safely maintain the electrical grid, let alone a nuclear reactor. Nuclear is not clean, never was, never will be, and never will be safe, especially in this era of more and more crazy and unpredictable weather patterns.
