Let's spend billions on clean renewables and improved storage not nuclear

A whole lot of work went into the decision to shut down Diablo Canyon: deep cost-benefit analysis and detailed planning. Let's stick with that, and with a fast path to clean, reliable energy.

Wind and solar do not require massive infrastructure. Nor do they produce deadly waste that must be stored and managed for hundreds, if not thousands, of years. Also, we will never run out of wind and sunlight.

Pouring billions into maintaining any nuclear plant, just takes that much money away from investing in better solutions that can be online quickly.

(Could not get Subjects box to work).
