Keep Diablo Canyon Operational, Indefinitely

I'm writing to express my sincere hope that the CEC will do whatever is necessary to keep the Diablo Canyon operational moving forward -- in the short *and* long term. Clean, carbon-free nuclear energy is essential for avoiding climate catastrophe, and for ensuring consistent power generation when inherently intermittent renewables are offline. I further hope that the CEC will embrace nuclear innovation, and take measures to see to it that next-generation reactors become a permanent part of California's energy landscape.
